

Syllabus  
COSC 051 Computer Science I

Instructor: J. Montgomery  
Office : 344 St. Mary's Hall  
Phone : 202-687-5233  
Email : [jmontgomery@cs.georgetown.edu](mailto:jmontgomery@cs.georgetown.edu)

**Course Description:**

This course is intended for computer science majors and minors, and other students with a serious interest in learning C++ programming. The course covers the following topics: basic data types, the C++ string class, variables and constants, and their declaration, input/output (cin/cout) operators, assignment operators, arithmetic operators, conditional control structures, repetition control structures, basic file operations, user-defined functions, value and reference parameters, scope rules, name precedence, function overloading, template functions, elementary software engineering principles, Standard Template Library (STL), the vector class, elementary searching and sorting, user-defined classes, operator overloading, pointers, self-referential classes, dynamic object creation and destruction, linked lists, and recursion. This course satisfies the college science requirement.

This course is intended to prepare computer science majors and minors. It also satisfies the college science requirement. COSC 051 is a very demanding course that will likely require 6-10 hours, or more, of work each week during the spring or fall semesters. Expect to spend even more under the accelerated summer schedule.

**Prerequisites:** Working knowledge of computers. Although there are no formal prerequisites, you do need to know how to use computers: create, modify, and delete files; create and remove directories; use the Web; use e-mail; and other like skills.

**Course Objectives:**

- Learn the C++ programming language
- Learn to analyze problems
- Learn to break problems into components that can be solved by computer programming
- Use C++ to create computer programs that implement problem solutions

**Required Text:**

- C++ Early Objects, 8<sup>th</sup> edition by Gaddis, Walters, and Muganda

**Suggested/Reference: (either text is fine)**

- C++ Primer, 5<sup>th</sup> Edition, Lippman, Lajoie and Moo
- C++ Primer Plus, 6th Edition by S. Prata

**Grading:**

Exams : Midterm (20%), Final (20%)

Programing: <= 6 assignments (45%)

Homework/Quizzes/Class participation: (10%)

**Grading Scale:**

Grade	Range		Grade	Range		Grade	Range
A	94 and up		B-	80-82		D	60-69
A-	90-93		C+	77-79		F	Below 60
B+	87-90		C	74-76			
B	83-86		C-	70-73			

**Submitting Assignments:** Assignments will be posted on Blackboard. All electronic submission requirements (source code, reports, conclusions, etc.) must be posted to Blackboard prior to the due date and time. Source code should be text files with the appropriate extension. Other file formats will be specified in the project description if applicable, naming conventions will be specified in the project description.

Additionally, please note:

- Unless otherwise specified in the assignment document; all assignments are due before class begins on the due date.
- A 2.5% penalty will be deducted per quarter-hour for any assignment that is submitted late.
- No make-up exams or early exams will be provided.
- If you miss a pop quiz or in-class graded exercise, no make-up will be provided (see below for possible exceptions).
- In general requests for due date extensions will not be considered. If you have a personal or family emergency that affects your school work, please notify me immediately. Your notification to me must include contact information for your academic advisor. After discussing your emergency situation with your academic advisor and/or dean's office; I will determine if an accommodation

is justified. If you have a medical issue or emergency notify me immediately. Once the medical situation is under control I will need a copy of a doctor's note explaining any missed class time or inability to work on assignments. At that time I will determine if an accommodation is justified. Your doctor's note must be acquired **prior to** the missed requirement and must **clearly and definitively state** that you were unable to complete academic duties during the time of the missed requirement.

☒**Programming Environment:** This class is about the use of computer programming to solve problems. You will do a lot of C++ programming. There are several Integrated Development Environments (IDEs) that you can use to create C++ programs. I will provide links to some of these options separately. Installation and use of any such third party application is optional, is your responsibility, and will not be covered during class.

**Attendance and Expectations:** Attendance is required. Not attending lectures will have an adverse effect on your class participation score. Further, you will be responsible for everything covered in class even if it is not in the textbook. Class participation could include pop quizzes and if you miss one of those there will be no makeup. If you need to leave the classroom during a lecture feel free to do so as quietly as possible. Please turn off cell phones or set them to vibrate prior to the start of class. Food and drinks are not allowed in the classroom.

**Academic Honesty:** I am required to report any suspicion of academic dishonesty to the Honor Council.

Exams must be entirely your own work. During exams, you are not allowed to view any other students work, show any other student your work, or engage in any discussion unless you need to ask me to clarify something regarding an exam question. Exams will be closed book and closed notes unless otherwise specified.

All homework assignments and individual projects must be the result your own effort. You may use outside resources such as research papers and books from the library but any solution techniques taken from outside sources must be properly documented. In the case of computer code submissions, these references should be cited in the program comments and in the assignment write-up. Material from web sites should be cited with a url and adequate information to determine what was used from that site.

You are permitted to have conversations and interactions with other students concerning general programming techniques. This means such discussions as one would reasonably expect to occur standing in front of a whiteboard. This explicitly precludes the detailed discussion of program code or other assignment products. You are strictly prohibited from discussing the specific details of your project or homework solution. You are strictly prohibited from viewing or copying someone else's source code. You are strictly prohibited from allowing someone else to view or

copy your source code. You may not email or otherwise provide to someone else the files associated with your programming project or other assignment documents. You may not submit someone else's file or files as your own.

**Weekly Course Schedule:** Provided separately.☐

*Course topics, administrative guidelines, and other specifics discussed in this syllabus are subject to change. Notice of any changes will be provided in class.*
