In this course you will be introduced to the study of ecology and the environment. We will survey mechanisms and processes at work in the environment, and consider the impact of people and issues of sustainability. We will focus on topics that often appear in the popular media, such as climate change, emerging diseases, and genetically modified organisms. You will develop the ability to critically evaluate discussion of environmental topics, including not only scientific aspects but also social and political factors.

In keeping with the Georgetown University Science requirement, this course will advance your progress toward the following learning goals:

- To understand the basic principles and some current research challenges of one or more areas of science.
- To understand science as a set of methods of inquiry that involve forming and testing hypotheses through the analysis of quantitative and qualitative data.
- To consume and interpret scientific information with critical understanding of the balance of certainty and uncertainty that research findings inevitably reflect.

I expect you to come to each class prepared, participate actively, treat all members of the class with respect, and turn assignments in on time. You can expect the same from me in return.

Lectures and Discussions
Our class minutes are a non-renewable resource and we must use them wisely. Attendance at all classes is important and expected. You are responsible for all information presented in class, including any announcements and course content not found in your textbook. Your active participation is expected. Participation entails coming to class prepared, listening actively, and speaking up when required. You may be asked to take a specific stance in a class debate, work in small groups, answer questions, or make a brief presentation to the class. For at least one class discussion, you will work with a classmate to lead and moderate the discussion. Of course participation is not possible if you are not here, so you must come to every class on time.

Readings
The required text for this course is Withgott and Laposata’s, *Essential Environment: The Science Behind the Stories*, Sixth Edition (earlier editions are also fine if you’re willing to translate page and chapter numbers). Additional readings will be available on Canvas. Assigned readings should be *completed* by the date indicated on the syllabus.

The lectures and readings for this course are designed to supplement, not repeat, each other. We will talk about topics in class that are not covered explicitly in the readings, and you will read about things that we will not discuss in much detail. I often use different examples than the text in order to give you an additional perspective, to highlight different aspects of an issue, or to provide local or current examples. Therefore, to do well in this course you should attend or watch all lectures and keep up with the readings.
**Evaluation and Grading (Tentative)**

Your performance in the course will be evaluated based on the following percentages:

- **One-Hour Exams (3)** .......................... 30% (highest = 11%, middle = 10%, lowest = 9%)
- **Final Exam** .................................... 12
- **Public Education Campaign** ............. 20
- **Environmental News Briefs** ............. 10
- **Write the Exams** ............................. 10
- **Ecological Footprint** ........................ 8
- **Discussions* and In-class Work** ........ 10

Final grades will be assigned based on the following percentages: A = 93.3-100%; A- = 90.0-93.3%, B+ = 86.6-90.0%; B = 83.3-86.6%; etc.

* Discussions include both in-person, synchronous contributions to class and written postings to Discussion boards.

**Dates and Deadlines**

As Ben Franklin almost said, nothing is certain but death, taxes, and deadlines. In this course deadlines are imposed not only to prevent you from falling behind, but also to ensure that your work can be returned to you in a timely manner. Exceptions will be made in cases of serious illness or family emergency and reasonable allowances will be made to accommodate other conflicts if they are brought to my attention before the deadline. A late assignment will lose 10% of its value every 24 hours and will not be accepted after 7 days (counting days that class does not meet, including weekends).

**Absences**

Attendance and participation at all classes is expected and multiple unexcused absences will negatively impact your grade. Absences due to approved events, such as religious holidays or University-sanctioned activities, should be discussed with me beforehand so that we can make suitable arrangements. Routine or excessive tardiness will be treated as absences. **Regardless of your reason for missing a class, YOU are responsible for finding out what you missed, getting copies of anything distributed in class, and turning in any work collected.**

**Sustainability**

In an effort to reduce the amount of paper generated by this course, I do not provide hard copies of supplemental readings. Instead, digital versions will be posted on the course Canvas site. Assignments will be submitted electronically via Canvas.

**Academic Integrity**

Copying from published sources or from classmates, failing to give full credit for quotations or ideas (including from course readings), consulting unauthorized materials during an exam, or attempting to pass any work done by others as your own are examples of plagiarism. Plagiarism is a violation of the Georgetown University Honor System. Moreover, it is simply wrong, and undermines the mutual trust on which an academic community must be based. Academic dishonesty in any form will not be tolerated in this course; students found in violation are subject to academic penalties that include, but are not limited to, failure of the course, termination from the program, and revocation of degrees already conferred. If you are worried you might run afoul of the Honor Code or suspect that someone else has, you must let me know.
**Intellectual Property and Copyrights**
The materials used in Georgetown University courses generally represent the intellectual property of the course instructor and may not be disseminated or reproduced in any form for public distribution (e.g., sale, exchange, uploading to off-university sites) without written permission of the course instructor. Course materials include all written or electronic documents and materials including syllabus, presentations such as power points or videos, assignments, study guides, current and past examinations, or any other documents or files provided by the instructor. Course materials may only be used by students enrolled in the course for academic purposes.

More information about intellectual property and copyright and about computer acceptable use policy and intellectual property can be found at the following websites: https://www.library.georgetown.edu/copyright and https://security.georgetown.edu/it-policies-procedures/computer-systems-aup

**Better Living Through Silicon**
It is easy to take computers and all they do for us for granted – until they fail. It is your responsibility to keep your computer in good working order and to back up your files regularly. This is especially important given the online setting of our course.

The Canvas Web site for this course can be accessed at http://georgetown.instructure.com. You will find a copy of this syllabus, announcements pertaining to the course, course assignments and readings, the discussion board, handouts or slide shows used in lecture.

If I need to contact you outside of class, I will send an e-mail to your Georgetown account (@georgetown.edu). **If you check a different account, please set up your Georgetown email account to automatically forward mail to that address.**

I check my email regularly but not constantly, and infrequently in the evening or on weekends. If you can’t wait at least 24 hours for me to read and respond to a message, it is better to call my office or come to my office in person.

Cell phones and other devices should be turned off and put away and no text messages sent or received during class.

**Extra Help**
The best way to learn is to teach others. I strongly encourage you to take advantage of the collective wisdom of your classmates – let your discussions spill over into time outside of formal class meetings, work together to discuss readings and prepare for class, form informal study groups. **The production of all assignments, however, should be your own work.**

Requests for academic accommodations must be formally filed with the Academic Resource Center (ARC). It is your responsibility to self-identify with the ARC. To schedule an appointment, email ARC@georgetown.edu or call (202) 687-0077. Note that there are no retroactive accommodations.

I strive to create a learning environment that supports a diversity of thoughts, perspectives, and experiences, and honors your identities (including race, gender, class, sexuality, religion, ability, etc.) To help accomplish this, please contact me if you have any suggestions.

I am committed to supporting survivors of sexual misconduct, including relationship violence, sexual harassment, and sexual assault. However, university policy also requires me to report any disclosures about sexual misconduct to the Title IX Coordinator, whose role is to coordinate the University’s response to sexual misconduct. Georgetown has a number of fully confidential professional resources who can provide support and assistance to survivors of sexual assault and other forms of sexual misconduct. More
information about campus resources and reporting sexual misconduct can be found at sexualassault.georgetown.edu.

I am available during my office hours and am happy to make appointments in order to discuss biology, course specifics, or other matters. If you are having difficulty with the course, please come and see me – the sooner the better – so that we can address the issues before it is too late. If you are enjoying the course, stop by to discuss topics we’re covering or things we aren’t getting to. I am interested in your questions, comments, and suggestions about this course.

Inclusivity and Diversity
I strive to create a learning environment that supports a diversity of thoughts, perspectives, and experiences, and honors your identities (including race, gender, class, sexuality, religion, ability, etc.). To help accomplish this, please contact me in person or electronically with any suggestions.

- If you prefer a name and/or set of pronouns that differ from those that appear in your official records, please let me know.
- If you feel like your performance in the course is being impacted by your experiences outside of class, please don’t hesitate to talk with me. If you prefer to speak with someone outside of the course, your academic dean or the Office of Student Affairs are excellent resources.
- We are all on the continuum of learning about diverse perspectives and identities. As a participant in course discussions, you should strive to honor the diversity of your classmates. If something was said in class (by anyone) that made you feel uncomfortable, please talk to me about it.

In an ideal world, science would be objective. However, much of science is subjective and is historically built on a small subset of privileged voices. I acknowledge that it is possible that there may be both overt and covert biases in the material due to the lens with which it was written, even though the material is primarily of a scientific nature. Integrating a diverse set of experiences is important for a more comprehensive understanding of science. Please contact me with your suggestions to improve the quality of the course materials.

I am committed to supporting survivors of sexual misconduct, including relationship violence, sexual harassment, and sexual assault. However, university policy also requires me to report any disclosures about sexual misconduct to the Title IX Coordinator, whose role is to coordinate the University’s response to sexual misconduct. Georgetown has a number of fully confidential professional resources who can provide support and assistance to survivors of sexual assault and other forms of sexual misconduct. More information about campus resources and reporting sexual misconduct can be found at sexualassault.georgetown.edu.

Special Notes About Summer School and Online Courses
Our summer course will be an intense experience as we cover the same material and concepts as a semester-long course in about a third of the time. During the summer session you have the opportunity to immerse yourself in the topic at hand and to focus on this one course in a way that is not possible during a typical semester, and this can provide a rewarding and productive experience.

However, you must recognize that there is no time to procrastinate. Something important (an exam, an assignment, a discussion) occurs almost every day. Because of the cumulative nature of the material, you must get your questions answered as soon as possible, before we move on to new topics that build on the old.

The online format of our course also presents opportunities and challenges. It gives you more flexibility about when and where you do some of your coursework, but also means you have to be more proactive about creating some of the structure that a face-to-face learning experience naturally imposes. Adopt the same rules and norms as if we were meeting in a classroom: get up, get dressed, get fed and caffeinated
before class; take notes; participate by asking and answering questions. And please make an effort to spend some of your day away from your computer and devices.

Just as with a traditional course, you should expect to spend 2-3 hours on your own outside of each scheduled hour. With an online course the line between in-class and out-of-class time is blurred; watching pre-recorded lecture videos counts as “in-class” time.

The best strategy is to establish a routine that includes time set aside for biology every single day in a space with minimal distractions. Work hard and keep up, seek help as soon as you need it, and you’ll do well.

I look forward to spending the semester exploring our environment with you!
